

Lost and Found Report – Group 23

Lost & Found Hub is a web application designed to help students report and recover lost items on campus. The platform simplifies the process of sharing information about lost or found belongings, making it easier for students to reconnect with their items. Users can submit reports with details such as item name, description, date, and location.

The homepage introduces the purpose of the site and includes a prominent “Report Item” button. Users can view a list of reported items, edit details, and delete posts once items are recovered. The app is built using Node.js, Express, MongoDB, and EJS templates. While authentication is not yet implemented, the project is structured to support future login features.

Team Contribution Table

Create a Word document with a table like this:

Member Name	GitHub Username	Role in Part 1	Tasks Completed
Aaron Fernandez	aaronfernz	Full Backend & Full Frontend, CRUD, mongo DB	Set up Express routes, Designed landing page, item list view, form templates MongoDB schema, CRUD logic, readme additions
Kenil Patel	Pkenil01	Video, Logo, Documentation	Owner of GitHub Repo, edited video, logo, addition to readme file
Rabijan Ragupalan	RabijanR	Express installation	Installed express into web service, render deployment
